

Fedora is a general purpose free operating system based on Linux that offers the best combination of robust and latest software that exists in the free software world. It is free to use, modify, and distribute now and forever. It has a rapid release cycle with new releases every 6–9 months to ensure continuous development. It is robust and secure. It has a base of over seventy distributions.

## Goal ?

Public forums. Open processes. Rapid innovation. Meritocracy and transparency. All in pursuit of the best operating system and platform that Free software can provide.

## Fedora Mentors Project

The Fedora Mentors program allows new Fedora contributors to work together with seasoned developers, authors, translators, testers, and other experienced contributors.

Hoping to see one and all.
